

2525 Hilgard Ave., Berkeley, Cal. Jan. 20, 1920

• Prof. P. A. Munz,

Dept. of Botany, Pomona College, Claremont, Cal.

Dear Sir:-

As per yours of the 15th, I am sending you today by express prepaid about 631 specimens of plants, nearly all from Montana and the Yellowstone Park and you may send me in exchange species from Southern California or outside of the the U.S.-- Philippine species specially desired. I have also several hundred species for exchange from the Ozark region of Missouri, Oklahoma and Utah, which I will be glad to exchange similarly, if you care to do this.

Until recently I understood that the botanical work at Pomona was merely a part of the Biological Department, but I am glad to learn that it is established on such a firm foundation.

Yours very truly,

J. H. Blankinship
